

# 2016

By 2016, all new government-funded buildings will be constructed using fully collaborative **3D BIM** where all project and asset information, documentation and data is electronic

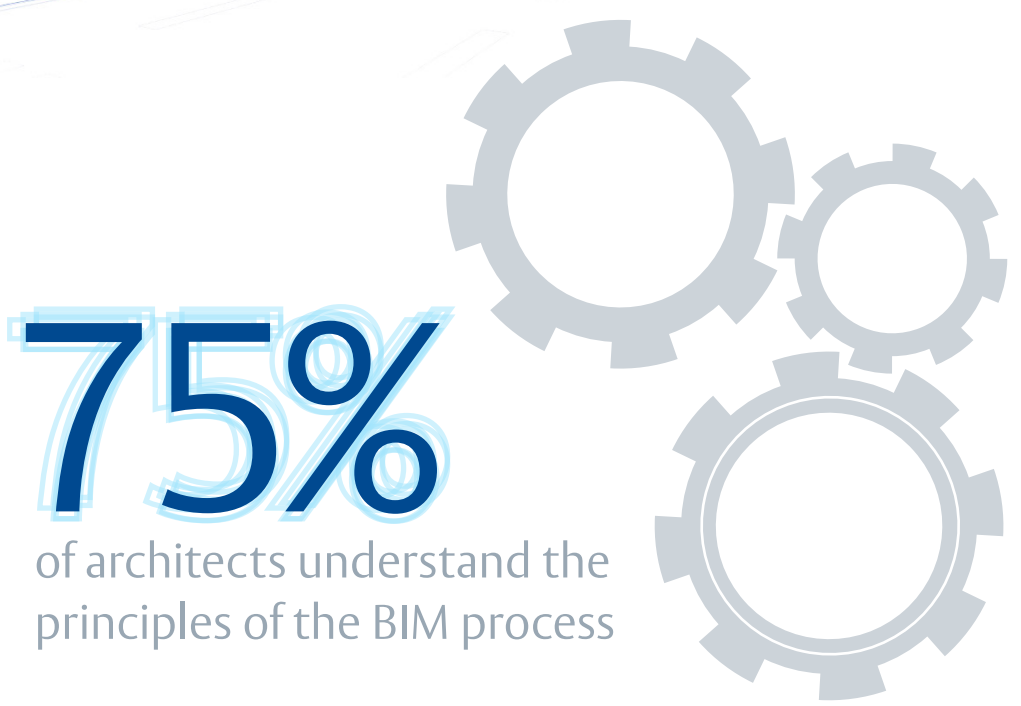

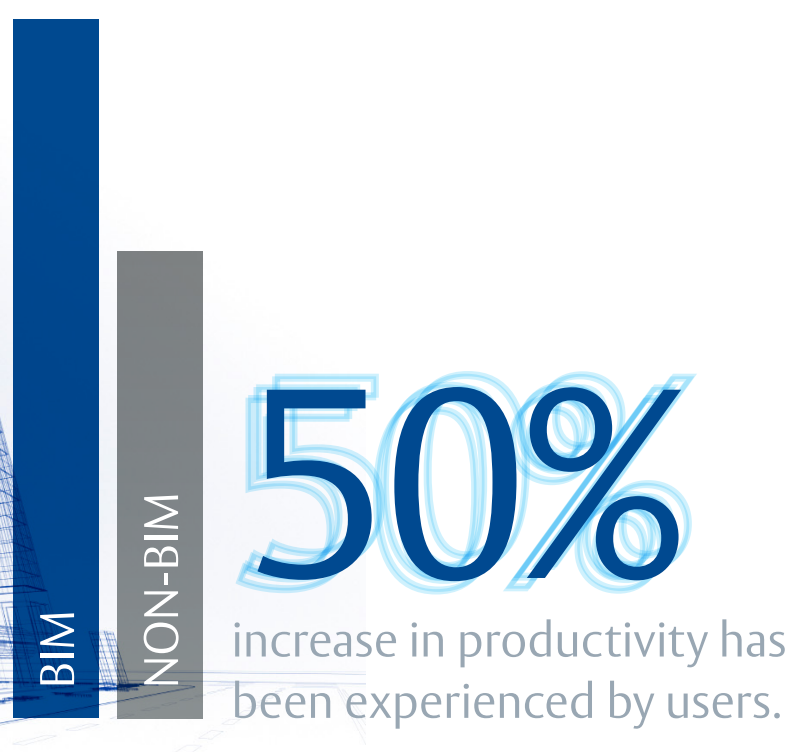

# 90%

 of Architects say they will be using BIM in the next 5 years

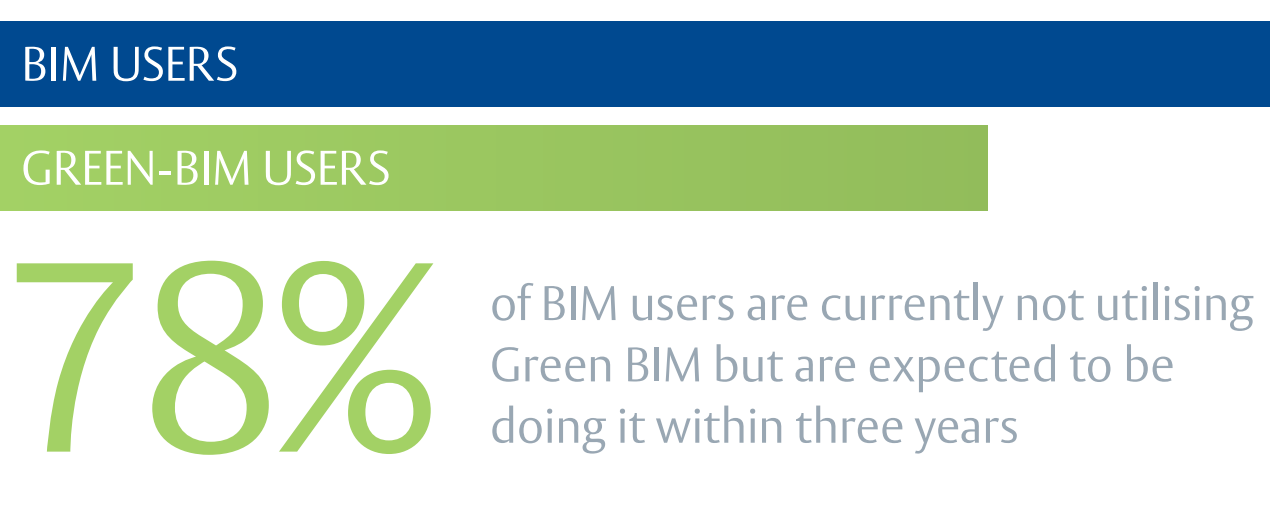

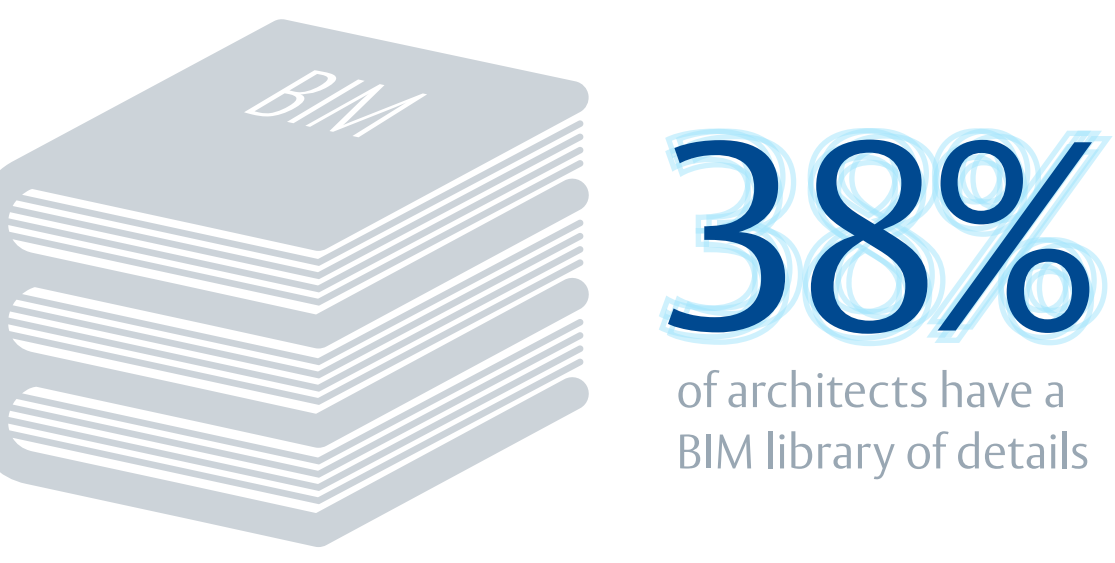

BIM creates a central model that each discipline involved in a project can access. Disciplines may include architects, contractors, M&E consultants and Security Specifiers.

Establishes collaboration through the life-cycle of an asset aiding Facilities Management

**4** **5** **6** **7** clearly defined development stages to ensure clear understanding of progress; RIBA Plan of Works has been updated to reflect this.

Using BIM in the design process helps evaluate energy efficiency and make recommendations for design alternatives that will enhance a building's performance

## ASSA ABLOY Security Solutions BIM products will launch

- 20 application specific BIM hardware objects and 9 complete BIM objects.
- The objects will be parametric, increasing the ease of flexibility for specifiers, who can more easily define the design intent of the object and make amends to the model.
