

# Moving spaces

London Wall Design has been in the movable wall industry for over 30 years and is continuously bringing ground breaking, intuitive technology to our product range. Our National team of experienced sales and technical specialists are here to guide you and work with you to create a unique and bespoke system for each requirement from inception to completion. Our services include technical advice, product presentations, site surveys, CAD/BIMS drawings with detailed specifications and obligation free budget quotations. Our showroom in Clerkenwell is open and available for viewings and consultation on weekdays from 9am.

London Wall have successfully secured and completed a number of exciting projects in a variety of sectors including: Healthcare, Education, Hotel and Conferencing facilities to large corporate boardrooms and meeting rooms across the United Kingdom. We also have a Service and Maintenance team who offer tailor made service and maintenance packages to suit any requirements on any product or system, safety inspections, repairs, preventative maintenance, replacements parts, operational instruction, relocations, alterations and modifications or system upgrades.

## Type 100

- Heavy duty, top hung, no floor track, individual panel movable acoustic wall
- Choice of manual, semi-electric or fully-electric operation
- Sound reduction ratings up to Rw 60dB (laboratory tested) – 105 mm thick panels available throughout the acoustic ranges
- Extensive choice of panel finishes
- Stacking options of 'E' type (single point suspension), 'Z' type (twin point guide roller) or 'K' type (twin point cross roller). Twin point suspension 'K' track allows panels to store within the opening, remotely or into recess cupboards
- 30 minute fire rating available
- Options include access / pass doors, glazing and junction panels, vision panels included in inset pass doors if required. Can be integrated with the G100 system

## Type G100

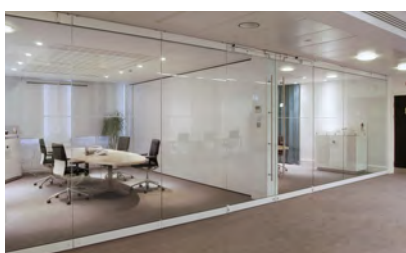

- Fully glazed top hung movable acoustic wall
- Choice of semi-electric or fully-electric operation
- Can be integrated with our solid Type 100 system
- Available with internal blinds housed in the double-glazed unit with motorised or manual operation
- Sound reduction ratings up to Rw 54dB (laboratory tested)
- Frame colour available to any RAL standard colour range
- Options include access / pass doors, integral blinds and junction panels

## Type 200

- Continuously hinged panels, sliding and folding to one side or both sides of an opening
- 80mm thick
- Available as a bottom roller system with floor track and top guide rail or top hung option (no floor track required)
- Centrefold, endfold or eccentric folding options
- Wide variety of panel finishes available including laminates, factory spray paint, magnetic whiteboard and bulletin board.
- Sound reduction ratings up to Rw 52 dB (laboratory tested)
- Access doors supplied as standard on each folding wall (optional door locks also available)
- 30 minute fire rating available on bottom roller system

## Type G200

- Floor supported acoustic sliding folding glass wall
- Sound reduction Rw 47dB (laboratory tested)
- Continuously hinged panels with a choice of natural, black or white anodised aluminium frame
- Can be integrated with the Type 200 solid panels.
- Bottom roller system with floor track and top guide rail.
- Endfold stacking configuration either one side or both sides of an opening.

## Type 80

- Top hung, movable acoustic wall with individual panels operated manually and sealed with retractable seals.
- Aluminium frame
- Sound reduction ratings up to Rw 55 dB (laboratory tested)
- Extensive choice of panel finishes
- Track system using single or twin point suspension – see Type 100 system stacking options for more detail.
- Options include access/pass doors, glazing with or without integral blinds and junction panels
- 30 minute and 60 minute fire rating available.

## Type GG

- Top hung, non-acoustic frameless glass sliding partition system
- Unlimited wall width of individual single glazed panels
- Top and bottom rails only
- Finished in standard silver anodised aluminium with options for stainless steel or powder coated to any RAL colour
- Track system using twin point suspension
- Full height access door provided as standard. Optional movable inset pass door also available

## The RG Plus

- Framed glass top-hung movable acoustic wall
- Manual or semi-electric operation
- Unlimited wall width of individual framed glass panels
- Sound reduction ratings of up to Rw 46dB (laboratory tested)
- Frame finished in powder coated to any RAL colour
- Track system using single or double point suspension
- Fully glazed access door available
- Options include semi-electric operation with slimmer frame and integral blinds
