

Cantilever Gate Project

Client

Iron Mountain Data Storage Facility

Location

Aberdeen

Project Description

To provide enhanced perimeter fencing and new automatic entrance gates.

Specification

Fencing supplied was Procter's 358 security mesh to the exposed elevations and replacement Colour Coated Palisade fencing and gates to the front entrance. Gates were delivered largely assembled on our hiab lorry and lifted in one piece into place. This means the gate is manually operable within an hour and security minimally compromised. Gates were automated via keypad, remote controls and intercom with an over-ride from the reception area.

Views show the gate loaded for despatch, viewed from outside, with the adjacent controlled pedestrian gate, and from inside showing motor housing and drive rack. (This has since been incorporated behind the profiled infill, hiding all the controls and motor housing.) All crushing, shear points are protected by safety edges and by twin infra red beams.

The gate is installed in strict accordance to current European Machine Directives and fully CE marked.
