rethinking stairs

ABOUT VULCAN

Vulcan Architectural is known for its high profile in creating Stair solutions. We add value to clients properties through the careful design and planning with practical advice. Our team is structured to assist in giving a wide range of respected blue chip client's control in their new build or re-development program. We provide the expertise to understand their goals and objectives to create clever, practical and functional walking areas.

CASE STUDY

Address	LOROL
Size	40 units
Total project value	Not disclosed
Case	

For this project, the architect, working on behalf of the LOROL team, wished to upgrade the DDA vision and AFA access for its many and varied properties. Using Vulcan Tread Systems, we worked closely with the design team, carrying out the station surveys, enabling us to advise on substrate preparation, repair, structural conditioning and installation procedures, ensuring all end results met the high standards expected. Vulcan worked carefully with the architects, merchants and contractors, ensuring everything was on site, on time and on budget.
